

USING 3D “ANAGLYPH” GLASSES

To enable Anaglyph Glasses mode, you need to turn it on in the Video Mode Settings dialog that comes up when you first launch the game:

VIDEO MODE SETTINGS

Resolution

1600x1200

☒ Play on Main monitor

☐ Play on Secondary monitor

☐ 16-bit

☒ 32-bit

☒ Use 3D Anaglyph Glasses

☐ B&W

☒ Color

☐ Don't show this dialog again.
(Hold down the Option key when launching the game to bring this dialog back).

Set

When you enable 3D Glasses in the dialog above, the entire game will be rendered such that you must use red-cyan glasses to see what's going on. Be sure that the red filter is over the left eye, and the cyan filter is over the right eye.

WHERE TO GET 3D GLASSES

You can find Red-Cyan anaglyph glasses pretty easily on the web, but we have had special glasses made which are calibrated specifically for Apple LCD displays, so they work much better than any stock glasses that you might find elsewhere.

There are two ways to get our custom-calibrated glasses:

1. Buy the boxed version of Nanosaur 2. We include two pairs of our custom Red-Cyan glasses in each box.

2. Buy them directly from the company that manufactured our custom glasses.

They will send you 2 pairs for \$5.00, so to place an order visit them here:

<http://www.rainbowsymphony.com/nano3d.html>

Please remember not to use the glasses as sunglasses or to use them for anything other than viewing anaglyph images. Limit your use of the glasses to avoid eye strain, and give your eyes time to re-adjust after using them.
